Grain size distribution curve showing Percent Finer by Weight versus Grain Size in Millimeters. The curve is plotted on a semi-logarithmic scale, with grain size in millimeters on the x-axis (logarithmic scale from 100 to 0.001) and percent finer by weight on the y-axis (linear scale from 0 to 100). The curve starts at 100% finer for 100 mm and decreases to approximately 15% finer at 0.075 mm (No. 200 sieve).
